

Rinnai I-Series Gas Boiler

Rinnai are well known for their instantaneous water heaters that have impressed the NZ market for many years with their reliability, performance and great value. Central Heating New Zealand are proud to offer the most powerful Combi gas boiler in New Zealand.

The Rinnai I-Series Gas Boiler is the perfect combination of reliability, technology and performance in one compact unit.

This high-performance combi boiler offers up to 95% real-world efficiency, delivering up to 39kW of heating performance. It can also provide up to 55kW DHW performance, producing high volumes of domestic hot water with flow rates up to 29L per minute at a 25°C rise and 24L per minute at a 30°C rise—making it the highest combi flow rate available in New Zealand.

The internal modulating diverting valve allows simultaneous delivery of hot water and heating without disruption, a first for combi boilers in the country. Precision domestic hot water temperature control is ensured through servo-based bypass control, while stainless steel primary, secondary, and DHW heat exchangers provide unmatched performance and durability. The unit features an easy-to-use controller, and its self-compensating gas valve eliminates the need for combustion analysis during commissioning, simplifying installation and servicing of the boiler.

Product Code	Style	Output	Weight	Dimensions
BRI3455	I-Series Combi	34kW	33kg	671 x 470 x 276

Contact us for further details.

- DHW flow rates of up to 29L per min @ 25°C rise and 24L per min @ 30°C rise – highest combi flow rates available in New Zealand
- 34kW heating
- 55kW Domestic Hot Water
- Compact Design
- Full New Zealand Certification
