FAQ

Rev 1.1

Central Heating
NEW ZEALAND

Model: **CHWAT**

4. Clip the front part of the thermostat onto the back plate and turn the power back on.
3. Screw the back plate securely back onto the wall.
2. Terminate the thermistor as shown in the wiring diagram.
1. Separate the front part of the thermostat by placing a small flat head terminal driver into the slots on the bottom face of the thermostat.

SYSTEM BEFORE COMMENCING INSTALLATION.

IN ORDER TO AVOID ANY RISK OF ELECTRIC SHOCK, TURN OFF THE POWER TO THE HEATING

Installation

Sensor Selection
Sensor options can be selected using switches 1 & 2:
Switch 1 = Off, 2 = On Air + Remote Floor
Switch 3 = Off, 3 = On Air + Remote Sensor
Switch 4 = Off, 4 = On Remote Floor

Air and Floor. The thermostat controls the air temperature whilst using the floor sensor to prevent overheating of the floor system or by maintaining a minimum floor temperature.

Floor sensor only. Controlling room temperature with no floor sensor options.

Air Only. Controlling room temperature with the back of the thermostat facing the floor sensor only.

Temperature sensor. Sensor options can be selected using switches 3 & 4:
3 = accessible sensor, 4 = remote sensor.

Remote Sensor. Selecting room temperature with the back of the thermostat facing the floor sensor only.

Min & Max Floor Settings
Switch 1 : Min 21 and 24, Switch 2 : Max 27 and 35,

Switch 3 = Off, Switch 4 = On Air + Remote Floor

Setting The Temperature

To change the set point, rotate the dial until it points to the desired temperature.

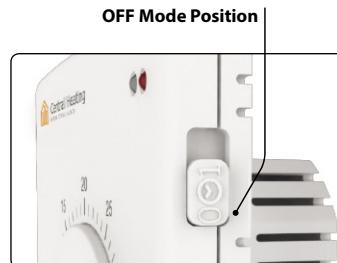

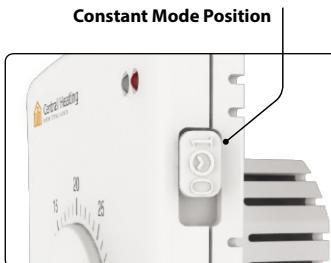

1 Constant Mode

The time clock can be bypassed by placing the switch into position 1.

In this position, the thermostat will ignore the time clock input and will continuously control to the set temperature. This feature can be used to extend the heating period without the need to adjust the time clock program.

0 Off Mode

Placing the thermostat switch into position 0 will turn OFF the heating completely.

Set-back Operation

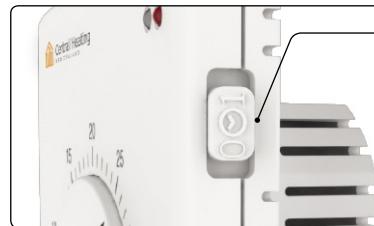

The CHWAT offers a set-back function that automatically reduces the set temperature by 4°C.

To make use of the set-back function, a 230v time clock is also required on the system.

Place the thermostat slide switch into the time clock position.

When the thermostat receives a 230v signal from the time clock it will control the temperature according to the dial setting.

When no 230v signal is received from the time clock, the thermostat will operate in setback mode and automatically reducing the set temperature by 4°C

Set-back Mode Position

LED LED Indication

Left LED

The left LED is the power LED. It is a two colour LED and is used to indicate the time clock / set-back status.

Right LED

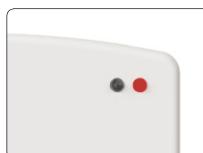

The right LED indicates the heating status. It illuminates when the thermostat is calling for heat.

Normal Mode

Set-back Mode

Heat On
