

DeLonghi Towel Rail Electric Element

- 230V
- 100 Watt
- 300mm in Length
- Supplied with ½" BSP Chrome Tee Piece for integrating with radiator valves

GB INSTRUCTIONS FOR THE ASSEMBLING AND USE OF HEATERS FOR ELECTRIC RADIATORS.

FOLLOWING INSTRUCTIONS TO BE PRESERVED CAREFULLY.
WARNING: DO NOT CONNECT THE HEATER TO NETWORK BEFORE HAVING READ AND UNDERSTOOD THE FOLLOWING INSTRUCTIONS.

CAUTION: For use only submersed in water or water/glycol.

SAFETY PRECAUTIONS:

Before using the heater please check the correspondence between the system's voltage and the heater's nominal tension. Electrical safety is guaranteed only and exclusively when the heater is connected to a properly earthed electrical system, as requested by the current safety standards.

APPLICATION:

This heaters is designed for exclusive use on radiators. The heaters must be used only immersed in liquid. Any other use is improper and therefore forbidden.

INSTALLATION:

In order to ensure correct operation and long life to system, please verify the correspondence between the power rating of the heater and that prescribed by the manufacturer of the radiator.

Before assembling the heater, please check that the o-ring is placed inside the nipple. Insert the heater vertically (upwards) into the specially provided hole.

Fill the radiator with liquid and verify that it is not leaking. Any plastic part surrounding the heating element must pass the glow-wire test (IEC 60335-1).

MAINTENANCE:

The mains cable cannot be replaced. Heaters with damaged supply cord must be replaced. In case of accidental overheating or improper use, the circuit of the heater might get interrupted. The heater must be replaced.
